

CHECK service ports
netstat -a -b

CHAPTER - 03

PORTS

- Ports is a endpoint of networking communication
- Port differentiates the services eg. mail, eg. udp, ftp, download etc.
- PORTS are used dynamic and static.

Why we need

same both 0-65535 TCP
0-65535 UDP
Total = 131070

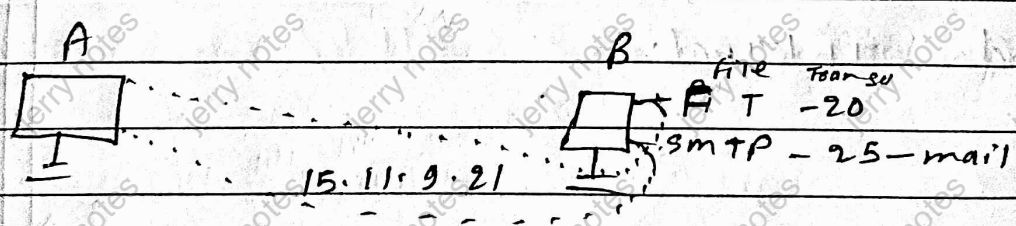

- As we know one computer can communicate with many computer services, ports is used for differentiates the task and provide them a clear way

0-1023 - well known PORTS

1024-49151 - Registered PORTS

49152-65535 - DYNAMIC PORTS

Port 80 runs on HTTP
443 runs on HTTPS

- IN A HANDLES the Port

FB 1.2.3.4 : 49158 5.6.7.8 : 443
Chrome 1.2.3.4 : 49159 6.7.8.9 : 443
